Research Experience

University of Texas at San Antonio - Department of Physics and Astronomy *San Antonio, TX*

Advisor: Dr. Marcelo Marucho *2021–present*

- *Oscillatory signal generation and propagation along microtubules*. In this project, we investigate electrical signal propagation along sub-cellular biopolymers. We develop electrical transmission line models (circuits and differential equations) and solve them numerically to explain the experimental results. We use Mathematica, Python, and the multiphysics tool COMSOL for numerical computation.
- *Electrical signal propagation along actin filaments in physiological and pathological conditions*. In this completed project, I used the multiscale theory developed by our group to study signal propagation along actin filament, a biopolymer, in healthy and diseased cells. I developed a Mathematica application as a research tool for this project. The application and related studies were published in computer physics communications.

University of Chittagong - Department of Physics *Chittagong, Bangladesh*

Advisor: Dr. Arun Kumar Deb *2006–2007*

- *Master's Thesis: Study of Lorentz and CPT violations in neutrino physics*. In this research, I studied the quantum phenomena of neutrino oscillation by applying theories and techniques in advanced quantum mechanics.
